

Department of Computer and Software Engineering – ITU
SE200T: Data Structures & Algorithms

Course Instructor: Usama Bin Shakeel	Dated: 21th Sep 2024
Teaching Assistant: Zainab, Sadia & Ryan	Semester: Fall 2024
Session: 2023-2027	Batch: BSSE2023B

Assignment 5. Implement Sorting Algorithms on Linked List

Name	Roll number	Obtained Marks/35

Checked on: _____

Signature: _____

Submission:

- Email instructor or TA if there are any questions. You cannot look at others' solutions or use others' solutions, however, you can discuss it with each other. Plagiarism will be dealt with according to the course policy.
- Submission after due time will not be accepted.

In this assignment you have to do following tasks:

Task 1: Ensure that you have installed all three softwares in your personal computer (Github, Cygwin & CLion). Now, accept the assignment posted in the classroom (e.g Google, LMS etc) and after accepting, clone the repository to your computer. Make sure you have logged into the github app with your account.

Task 2: Review Your Previous Implementations

Task 3: Calculate Time and Space complexities and create a detailed report.

Task 4: Keep your document and code in the respective git cloned folder.

Task 5: Commit and Push the changes through the Github App

Problem Statement:

Extend your linked list code implemented in lab and add the following sorting algorithms in it

- *void bubbleSort()*
- *void selectionSort()*
- *void insertionSort()*
- *void mergeSort()*
- *void quickSort()*
- *void countSort()*
- *void radixSort()*

Implement int getIndexData() Function: *Add a method called getIndexData(int index) that returns the data of the node at the specified index*

Important Notice for Your Assignment

Please read the following instructions carefully:

1. ***Do Not Modify test.cpp:*** *You are strictly prohibited from making any changes to the test.cpp file. This file is designed to test your implementation and any modifications will lead to the assignment being graded as zero.*
2. ***Class Definitions:*** *All class definitions and implementations must be provided solely within the files functions.h and functions.cpp. You are not allowed to create any additional files for your class definitions or implementations.*
3. ***Swapping of Values:*** *During the implementation of sorting functionalities, ensure that you swap the entire nodes instead of merely swapping their data values.*

Any deviation from these rules, including creating additional files or modifying the test.cpp file, will result in your assignment receiving a grade of zero.

Assessment Rubric for Assignment

Performance metric	CL O	Able to complete the task over 80% (4-5)	Able to complete the task 50-80% (2-3)	Able to complete the task below 50% (0-1)	Marks
1. Realization of experiment	3	Executes without errors excellent user prompts, good use of symbols, spacing in output. The testing has been completed.	Executes without errors, user prompts are understandable, minimum use of symbols or spacing in output. Some testing has been completed.	Does not execute due to syntax errors, runtime errors, user prompts are misleading or non-existent. No testing has been completed.	
2. Conducting experiment	2	Able to make changes and answer all questions.	Partially able to make changes and few incorrect answers.	Unable to make changes and answer all questions.	
3. Computer use	4	Document submission timely.	Document submission late.	Document submission not done.	
4. Teamwork	4	Actively engages and cooperates with other group member(s) in an effective manner.	Cooperates with other group member(s) in a reasonable manner but conduct can be improved.	Distracts or discourages other group members from conducting the experiment	
5. Laboratory safety and disciplinary rules	2	Code comments are added and do help the reader to understand the code.	Code comments are added and do not help the reader to understand the code.	Code comments are not added.	
6. Data collection	2	Excellent use of white space, creatively organized work, excellent use of variables and constants, correct identifiers for constants, No line-wrap.	Includes name, and assignment, white space makes the program fairly easy to read. Title, organized work, good use of variables.	Poor use of white space (indentation, blank lines) making code hard to read, disorganized and messy.	
7. Data analysis	3	Solution is efficient, easy to understand, and maintain.	A logical solution that is easy to follow but it is not the most efficient.	A difficult and inefficient solution.	
Total (out of 35):
